Wall Control

Installation Guide

This wall control requires a specific and accurately cut hole size, consequently please read the following instructions carefully. This wall controller must be installed by a licenced electrician.

- 1 Make a hole in the plasterboard as per the following dimensions:

- 2 Use the provided black plasterboard clip (pictured below) and place it inside the plasterboard opening.

Black Plasterboard clip

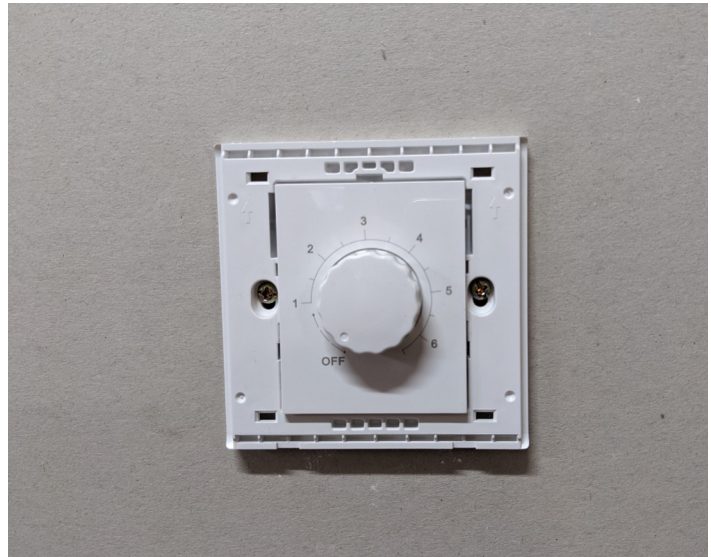

Ensure screw holes are visible

3

Connect wiring as per the wiring diagram in the installation manual.

Remove the cover from the faceplate using a flathead screwdriver.

Use the 2x 52mm screws provided to secure the faceplate to the plasterboard C Clips.

4

Tighten both screws sufficiently to ensure the wall control is securely in place and level.

5

Clip cover back in place securely.
